HARMONY
a LIGON company

To Whom It May Concern,

My name is Ben Wright, I am the Automation Engineer at Harmony Castings in charge of the automation efforts within the foundry. This letter is intended to serve as a recommendation for Aiden Terry for future opportunities in robotics, engineering, and automation. During his internship with our team, he has demonstrated a strong willingness to learn, a practical approach to problem-solving, and the ability to take initiative when working on complex engineering projects.

I met Aiden as an applicant for our Robotics/Engineering Intern position. I was very impressed by his professionalism, knowledge in 3D modeling, and experience with control systems.

One of his primary areas of involvement has been supporting the deployment of Predictive Maintenance Sensors on a new blaster unit. As part of this project, he developed code, installed and configured the sensors, and helped develop installation plans to support a successful deployment. He has also gained valuable experience with FANUC robot programming through his work helping implement our new Creaform Scanning Cell. He also took ownership of developing multiple path programs for our various robotic arms and demonstrated an impressive ability to learn new programming concepts and apply them in a production environment. In addition to programming and controls work, Aiden has developed a broader understanding of what it takes to successfully implement industrial robotic systems. He has learned the importance of proper cable management, maintaining clean and organized work areas, and designing equipment that is both functional and maintainable.

I believe Aiden has significant potential for continued growth in the engineering and robotics fields. I am confident that the technical skills, work ethic, initiative, and hands-on experience he has developed during his internship will serve him well in his future career. I would be happy to recommend him for future academic or professional opportunities.

Sincerely,

Ben Wright
Automation Engineer
